☑ Start Frontend Server (React)

Step-by-Step:

1. **Navigate to the frontend/client directory:**

bash

CopyEdit

```
cd househunt-frontend
```

2. **Install dependencies (if not done already):**

bash

CopyEdit

```
npm install
```

3. **Start the React development server:**

bash

CopyEdit

```
npm start
```

This will start the app on **http://localhost:3000**

⚒ Common Fixes

- If npm start fails:
  - Make sure you're in the correct folder (househunt-frontend)
  - Check that package.json exists and includes a start script
  - If needed, delete node_modules and reinstall:

bash

CopyEdit

```
rm -rf node_modules
npm install
```
